CRIMSON VISTA

Strategic Services

In today's evolving threat landscape, capability is the differentiator. Crimson Vista's Strategic Services empower your organization to lead with confidence, expand your service offerings, and elevate your internal expertise. Crimson Vista doesn't just consult—we embed and enhance capability. Whether you're an MSP looking to offer next-generation services or a CISO seeking to amplify your impact—our team becomes your strategic ally. Our Strategic Services include:

Vista Tier-X℠ for MSPs and MSSPs

MSPs and MSSPs often miss out on sales opportunities and up-sell packages because they may not have the expertise on staff to handle advanced or specialized offerings. Vista Tier-X is Crimson Vista's Advanced-Tier As A Service offering that enables MSPs and MSSPs to offer advanced services with minimal investment and risk. Vista Tier-X subscriptions enable MS(S)Ps to offer specialized services directly while receiving support as needed from Crimson Vista's SMEs. This offering provides the MS(S)P with the necessary materials and training to offer their customer segments services in security IAM, SOC, and data/device management as well as in AI integration, management, and governance. Custom services can be designed if needed.

- Designed and supported offerings for MSPs to service their customer segments
- Training, marketing materials, and competitive analysis
- Guidebooks for common problems and solutions
- Embedded engineers and architects as needed for security, AI, and other technologies
- Support for MS Azure/O365, Google Workspace, and AWS solutions

SecurityHub℠ Service for Augmented Security Operations

Even a reasonably staffed cybersecurity team finds it difficult to put out all the fires they face in a given day. And most CISOs do NOT feel they have a reasonably staffed team. Crimson Vista's SecurityHub is a security-team-for-contract that can help augment any company's internal resources, especially in areas that require significant subject-matter expertise. We are capable of handling advanced issues with cybersecurity including AI-related issues. Not only can we augment staff, but we can also provide training, guidance, and operational support as needed. SecurityHub+Legal is an add-on bundle provided through Crimson Vista's legal partner: Castroland Legal. Additional information regarding this services bundle can be found on our website.

- On-call SMEs who can step in, stabilize, and guide—without full-time overhead
- CISO advisory and fractional security leadership
- Secure SDLC support, CI/CD pipeline hardening
- AI governance and security analysis including AI penetration testing

CrimsonIgnite℠ Service for Custom Engineering

CrimsonIgnite positioned security engineering teams with a strategic advantage. Our services span resilience engineering, operational enablement, and executive-level advisory—embedding cybersecurity into core processes, organizational structures, and leadership priorities. We drive execution through precision training and tailored planning that deliver measurable outcomes, while our strategy teams develop roadmaps that align cyber priorities with enterprise objectives. What sets us apart is our ability to translate insight into action—combining analytical depth with practical guidance to build security programs that perform, scale, and endure.

- Resilient by Design – Embedding cybersecurity into process, structure, and leadership.
- Operational Excellence – Training and planning that deliver measurable performance.
- Strategic Alignment – Roadmaps that link cybersecurity to business value.
- Advisory with Depth – Insight-driven consulting that drives transformation.

ABOUT CRIMSON VISTA

Our Advanced Persistent Defense (APD) approach is central to how we protect our clients. Cyber threats aren't one-off events—they're ongoing, evolving risks. APD emphasizes continuous monitoring, rapid response, and proactive adaptation to ensure you're not just reacting to threats but staying ahead of them. By layering proactive defense measures with intelligent risk detection, we provide round-the-clock protection against even the most sophisticated attacks.

These services are performed through Crimson Vista Defender, LLC, a wholly-owned subsidiary of Crimson Vista, Inc.
